Claim

1. I claim the Shingle Lay an aligning tool for aligning shingles as they are applied to a roof. The Shingle Lay is a long extruded piece of aluminum with a front rib which is 1", one inch from the front and a second rib, 1/2", one half inch from the back. Between the ribs the base is corrugated to give the lay strength.
2. This tool aligns and holds the shingles as the workers are busy fastening the shingles to the roof.
3. The lay is supported by a, 1/8", one eights inch cable with beads at, 5", five inch intervals. This aligns the tool for each row of shingles accurately.
4. The lay aligns the starter shingles and holds each row of shingles all the way up the roof.
